Dr. Jerry Tennant
9901 Valley Ranch Pkwy E
Suite 1009
Irving, TX, 75063

Dear Jerry,

This is to update you on some of our recent cases with the Biomodulator. Our doctors are still talking about your presentation. They were very impressed with your data, research and case histories. We all appreciate your commitment to helping alleviate pain and suffering.

We are now using the Biomodulator every Friday at the LSU clinic with great results. We also have a clinic on Tuesday at another location for veterans. Bill Huddleston and Dina Leighton are working with me to treat various problems. Some of these cases have been dramatic. I will give a few examples of the kind of results we are getting.

-Chronic joint pain-shoulders, elbows and knees, with reversal of pain and swelling. Two of these cases have bought their own units to continue treatment at home.
-Neck and back pain patients of long duration have improved significantly. Many of these have exhausted all avenues of care including drugs, injections and even surgery.
-Post-traumatic head injuries. Several veterans of the Iraq war have been treated. Results have included decreased headaches, and improved memory and alertness,
-One patient with avascular necrosis of the head of the femur has shown regeneration confirmed by X-ray studies.
-Headaches. Migraines and tension headaches are really helped. One patient had three treatments (six points of face and "little wings" to neck) with no return of headaches three years after the treatment.
-Carpal tunnel syndrome. These cases were being considered for surgery but now have no pain and no numbness of fingers.
-Plantar faciitis has responded beautifully. One of these cases was so impressed that he bought his own unit.
-Acute brown recluse spider bite. This case had immediate relief of pain and redness.
-Acute Sinusitis. Most of these cases have improved dramatically with no further medications required.
-Acute anxiety. There was a decrease of blood pressure and pulse rate. These patients are less agitated after treatment. The "little wings" procedure is especially good for these cases.

There are many other cases but these are a few examples of the benefits of the Biomodulator. Thanks for getting me started with this and all the support you have given through the years.

Best regards,

Charles Norwood MD
