- Non-Metal Implants
- Utilizing the latest technology with autologous patient derived growth factors to stimulate and accelerate healing and the Tennant Biomodulator to help eliminate pain and enhance healing.

After surgeries the Tennant Biomodulator with the BioTransducer attached is used on each patient. Patients rarely experience any swelling, bruising or require any pain medications due to the gentle dental approach and the use of these creditable devices.

He provides the appropriate information to allow patients to make informed decisions regarding their health.

After careful communication, thorough examination, 3D Cone Beam Scan, analysis of any lab tests, cardiovascular assessment, clarification of any questions, treatment plan options and decisions about services requested, he helps patients with Pre and Post-Surgical Relaxation and Pain Relief Therapy. He offers options to help patients relax including breathing techniques and a simple non-invasive relaxation therapy that balances the ANS and cranial sacral system using the Tennant Biomodulator for 5 to 10 minutes prior to dental services. His dental and surgical procedures are conducted with minimally invasive techniques concerning orthodontic, restorative, surgical (hard and soft tissue) and temporomandibular joint stabilization and balance that he has researched and developed over the past 28 years of practice.
