

Under Sink Alkaline Anti-Oxidant Reverse Osmosis Purification System

PH-RO-1000

This Six-Stage Alkaline Reverse Osmosis Water System is different from all other Reverse Osmosis Water Systems because it utilizes an Alkaline Filter which restores the essential nutrients and minerals removed by the membrane in the filtration process. Regular Reverse Osmosis Filters will purify the water but leaves the water with an acidic pH level. Alkaline water is much healthier.

The Alkaline Filter has the capability of restoring the necessary minerals back into the water before it comes out of the faucet. These minerals are crucial for the body to perform and without the fifth stage in the system, the drinking water is clean and pure, but the necessary elements for the body are missing. Therefore, this Six-Stage Alkaline Reverse Osmosis Water System is far superior to other Reverse Osmosis Systems.

The Alkaline Filter on in this Six-Stage Alkaline Reverse Osmosis System poses many advantages to the consumer. Alkaline water has many health benefits including restoring the natural pH balance of the body. The human body has a blood pH of 7.365 and it is essential to maintain this pH balance. Much of what we eat, such as processed sugar, meat, dairy, and coffee has an acidic effect on the pH balance, and the body has to work extra hard to restore itself to a neutral pH. Alkaline water greatly assists in this process by introducing a higher pH to the body to offset the low pH and therefore, the natural balance is reestablished .

"The Secret of Life is both to feed and nourish the cells and let them flush their waste and toxins"

Dr. Alexis Carrell, Nobel Prize recipient

Stage 5

The Alkaline Filter is the most important part of the system. The Alkaline Water Filter utilizes Tourmaline Ceramic, which, when combined with Reverse Osmosis water, emits far-infrared rays to produce 'living water'. Far infrared rays are known for their powerful healing and detoxifying effects on organisms. Far-infrared rays suppress the growth of excessive free radicals and shorten the cluster chain of H₂O. The purified and activated water has smaller water clusters, which are more efficient at protecting cells from various aggressors. The Alkaline Filter redeposits the vital minerals, which are needed for the human body to function at its optimum level, back into the water.

Stage 4

50 Gallon per Day Reverse Osmosis Membrane removes up to 99% of harmful metals such as lead, copper, barium, chromium, mercury, cadmium, fluoride, nitrite, and selenium. The Membrane also removes pharmaceuticals drugs, bacteria such as E.Coli and other toxins that may be present in the water. If the filters in the first three stages are properly maintained, the Membrane will last longer.

Faucet, tank and tubing accessories included

Stage 3

Five-Micron Granular Activated Carbon Filter continues to remove impurities and chemicals such as SOCs (Soluble Organic Compounds), VOCs (Volatile Organic Compounds), and trihalomethanes (carcinogenic organic chemicals).

Stage 2

Five-Micron Carbon Block Filter is made of high-purity coconut shell which activates the Carbon Block. It further removes sediment and odor, improves taste, and removes chemicals such as, pesticides, dioxins, chloroform, and petrochemicals. It also removes harmful chlorine which can create by-products that have been linked to cancer as certified by Underwriter Laboratories Environmental and Public Health Programs.

Stage 1

Five-Micron Sediment Pre-Filter removes dirt, rust, and sand, completing the initial step in providing premium drinking water. This step is important because it keeps harmful residue from entering the subsequent filters.

Stage 6

Post-Carbon Taste and Odor Polishing Filter
